OFFICE OF THE ACADEMIC RESEARCH MANAGERS

Dear DIGICORE Members and Associate Members,

The DIGICORE Working Groups are designed to bring together experts from the DIGICORE institutions foster innovative ideas, promote interdisciplinary collaboration, and drive advancements in cancer research. By joining forces among leading centres, we can collectively make substantial progress in understanding cancer biology, developing new therapies, and improving patient outcomes.

After our recent appointment as DIGICORE Academic Research Managers the Working Groups were revised and restructured. Please see the new list below:

- » Lung (NSCLC, SCLC, Mesothelioma)
- » Breast (with a focus on Her2)
- » Urology (prostate, bladder etc – more urogenital)
- » Colorectal
- » Upper GI (oesophageal, stomach, liver, and bile duct, pancreatic)
- » Brain & Head and Neck
- » OBGYN (ovarian, cervix, endometrial cancers)
- » Hematological

We would like to invite researchers from the DIGICORE Members and Associate Members to participate in these Working Groups. We previously requested nominations a year ago, but due to the significant increase in membership over the past year, we need to ask again to ensure that all Members and Associates may express their interests. For more information on the DIGICORE membership please go to <https://digicore-cancer.eu/network/members>.

The interested individuals of your centre are kindly requested to submit their candidacies by August 31st to info@digicore-cancer.eu with the information below and declaring the Working Group(s) they would like to join.

1. Name and Surname
2. E-mail address
3. Name of Institution
4. Position

A videoconference will be organised soon in order to introduce DIGICORE and our role in the Organisation. The participants to the Working Group will be then requested to enter specific virtual conference rooms where to discuss in more details how to manage the activities to be developed.
