

The State of the Art in Multi-Country Cancer RWE ?

ORWIC: Ovarian Real World International Consortium

Geoff Hall

Consultant in Medical Oncology, Leeds Cancer Centre

Prof in Digital Health and Cancer Medicine

Clinical Lead for DATA-CAN, the Health Data Research UK Hub for Cancer

The Leeds Teaching Hospitals

NHS Trust

<http://www.leedsth.nhs.uk/>

H Hospitals

- Leeds General Infirmary
- St' James's University Hospital
- Chapel Allerton Hospital
- Leeds Children's Hospital
- Seacroft Hospital
- Wharfedale Hospital

- The Leeds Teaching Hospitals NHS Trust (LTHT) is one of the largest trusts in the UK
- The trust has **6 sites**, including paediatric centre
- One of the largest **teaching hospitals** in Europe

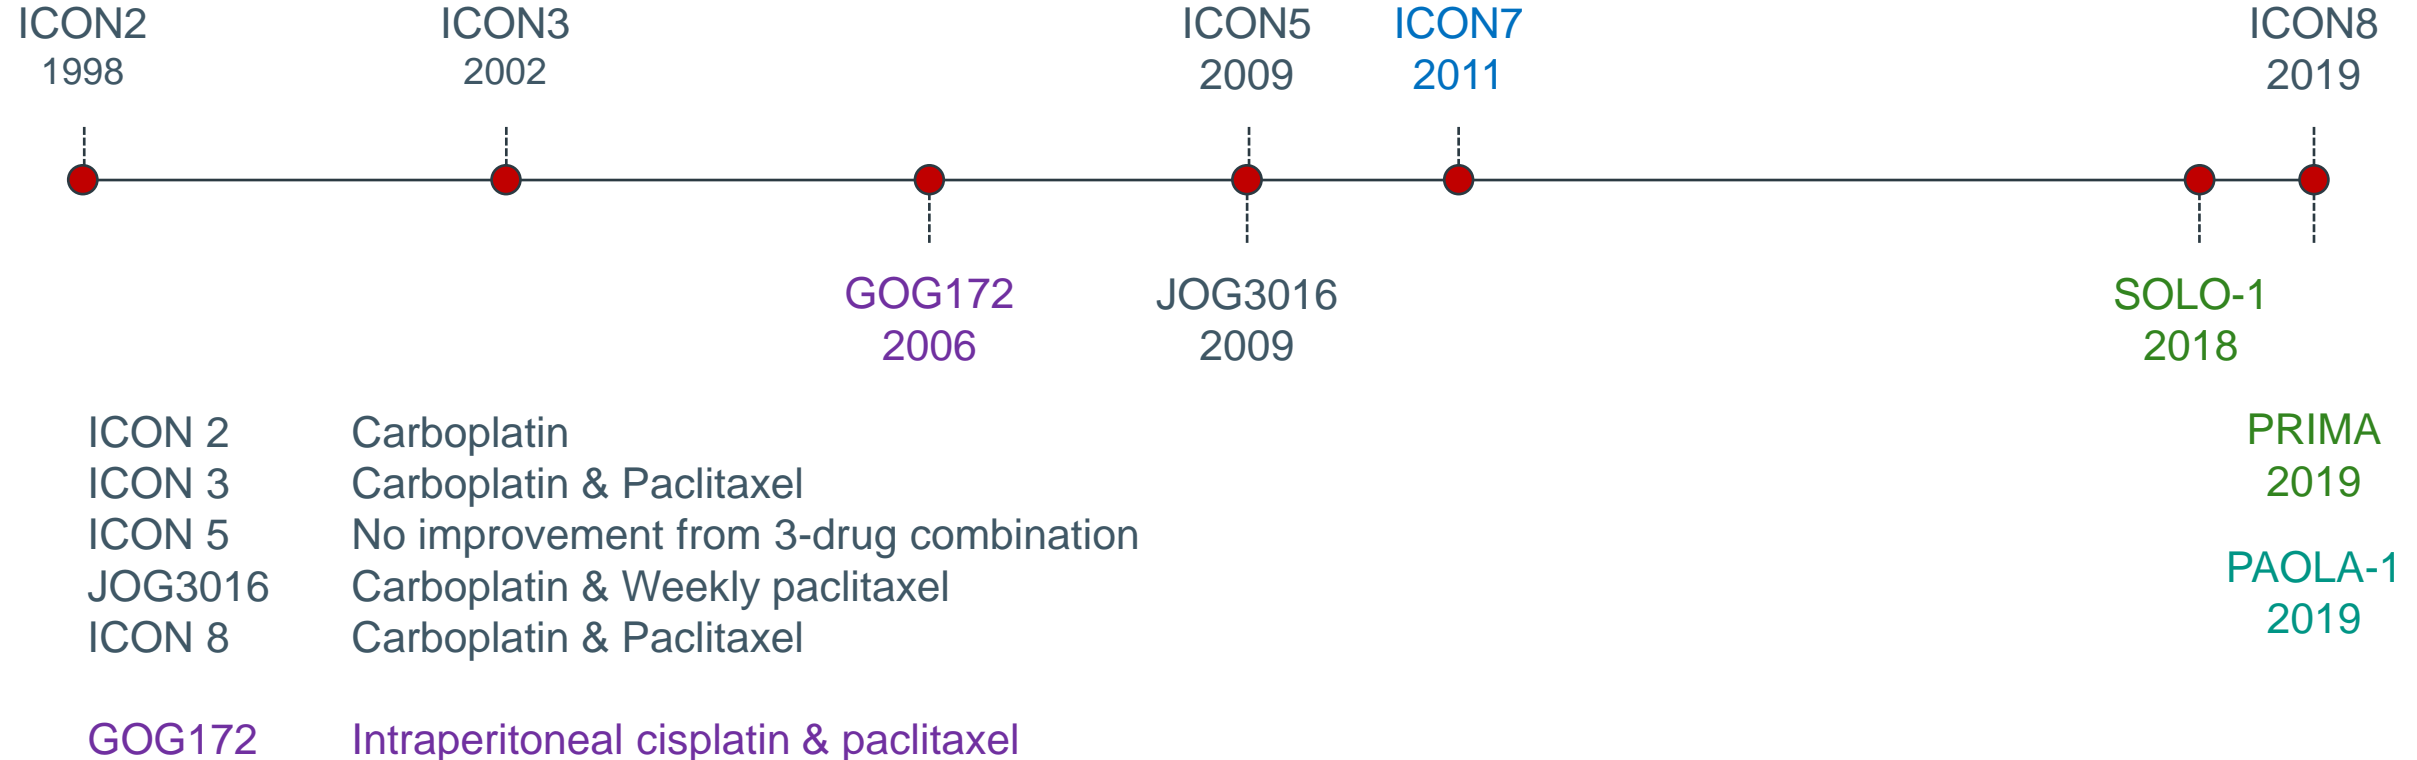

- Treats **~5% of UK population** with 1,200 inpatient beds together with critical care and day case beds
- **Local district hospital for population of Leeds (~1M)**
- **Specialist cancer services to Yorkshire (~2.7M)**
- **Regional centre for a number of specialist cancer (~5.7M)**

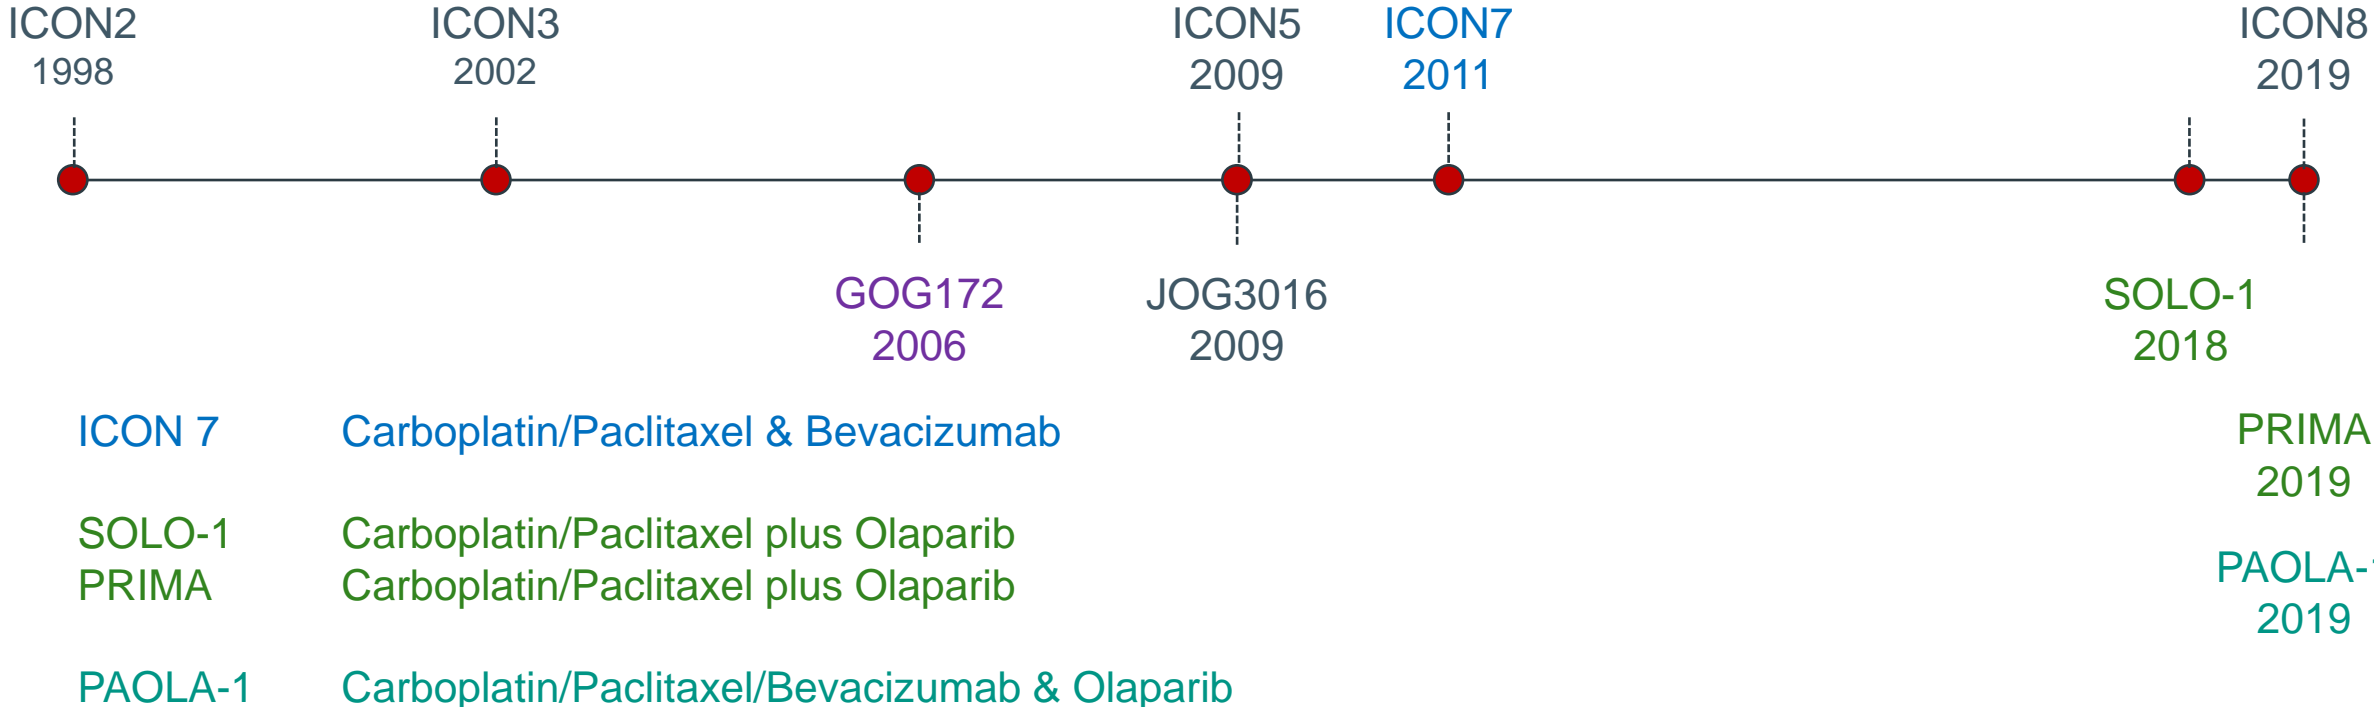

- **Largest provider** of specialist services in UK
- **Largest integrated Cancer Centre** in UK

Clinical trials - the gold standard to define new pathways of care

Clinical trials - the gold standard to define new pathways of care

Clinical trials - the gold standard to define new pathways of care

Leeds Ovarian cancer cases ~ 5,000
Leeds Trial Recruitment ~ 200
~ 4% recruitment

Why ?

Elderly, frail, co-morbidity
Patient choice
Education/deprivation

PRIMA
2019
PAOLA-1
2019

Clinical trials – are they really a gold standard ?

- Clinical trials
 - “Perfect” data on an imperfect population

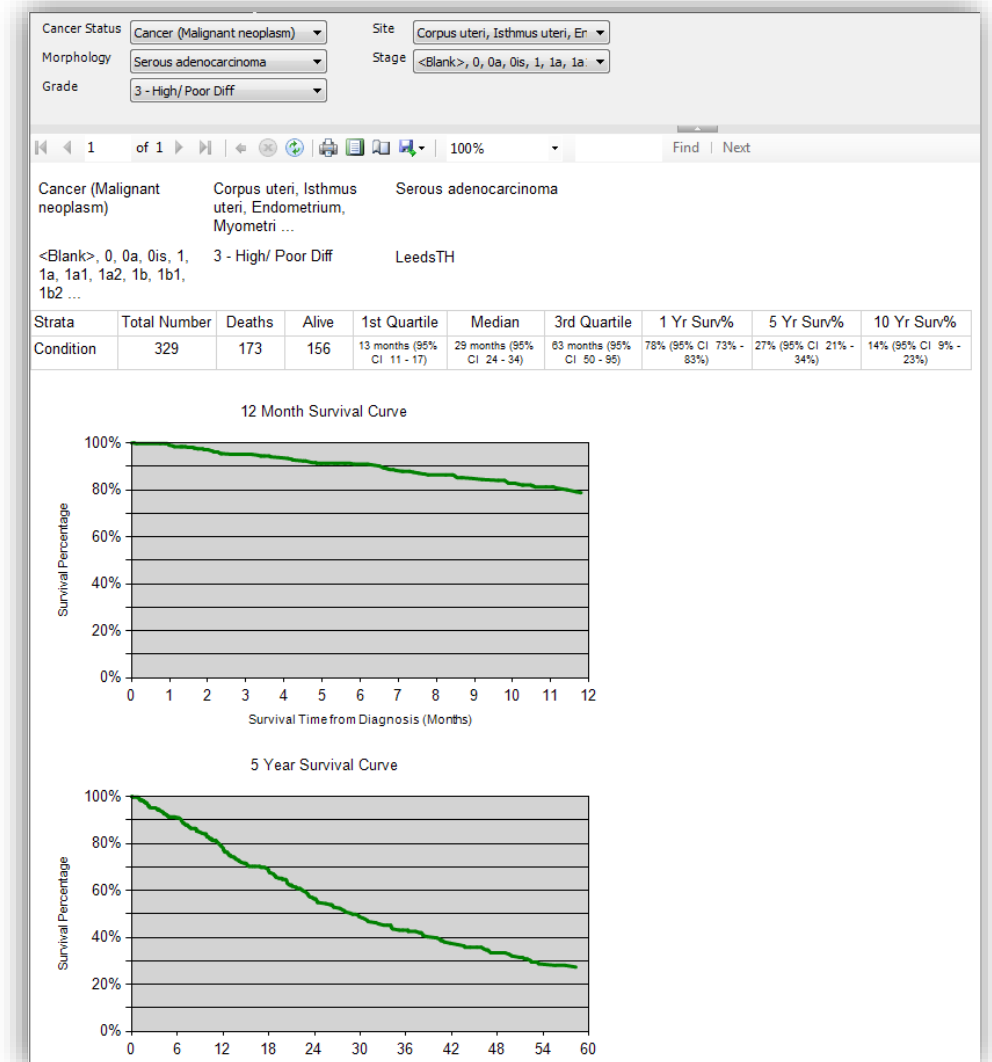

Clinical trials – are they really a gold standard ?

- Clinical trials
 - “Perfect” data on an imperfect population
- Real World Evidence
 - Imperfect data on the perfect population

PPM and Cancer Outcomes – 2003 to today

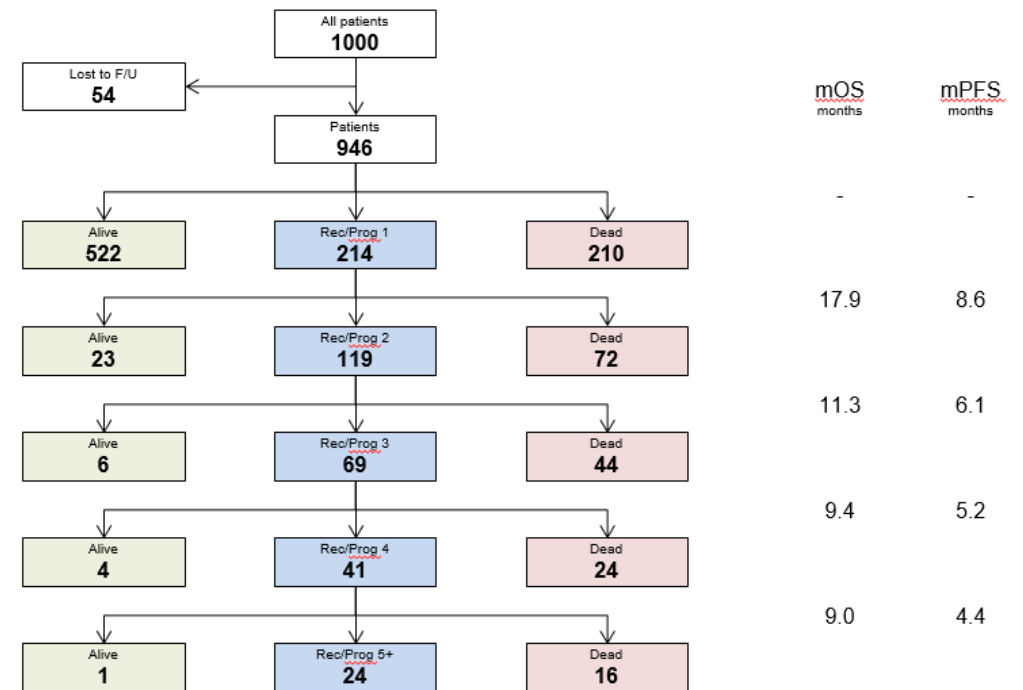

Instant analysis of uncurated data within clinic
Excellent for counts, overall survival

Strata	Total	Events	Censored	Surv Day30	Surv Day60	Surv Day90	Surv Year1	Surv Year2	Surv Year5
Breast - Breast - Carcinoma in Situ	1218	64	1154	100.00%	100.00%	99.91%	99.05%	97.73%	93.08%

Leeds Real World Evidence – Patterns of Recurrence

- 1000 sequential breast cancer diagnoses
- 1999 to 2001
- Leeds only cases – Surgery, ChemoRx, RadioRx
- Case note review and curation
- Define each recurrence until last review or death
- Assess patterns of recurrence
- Describe pathways of care from diagnosis to death

Case Study – Breast cancer & Novartis

- ER/PR +ve, HER2 –ve breast cancer
 - Patient characteristics (e.g. histology, biomarkers, stage)
 - Treatment patterns (lines of chemotherapy, radiotherapy and oncology surgery)
 - Outcomes from diagnosis, recurrence(s) to death

Characteristic n (% of sub-cohort)	Study cohort (N = 196)	Diagnosed metastatic (N = 72)	Progressed metastatic (N = 124)
Age at diagnosis, median (range)	67 years (33-92)	69 years (33-92)	67 years (33-90)
Pre/peri-menopausal ^a	25 (12.8%)	11 (15.3%)	14 (11.3%)
Post-menopausal	167 (85.2%)	60 (83.3%)	107 (86.3%)
Morphology (1° tumour)			
Infiltrating duct carcinoma, NOS ^b	117 (59.7%)	40 (55.6%)	77 (62.1%)
Lobular carcinoma, NOS	29 (14.8%)	11 (15.3%)	18 (14.5%)
Carcinoma, NOS	26 (13.3%)	12 (16.7%)	14 (11.3%)
Other	24 (12.2%)	9 (12.5%)	15 (12.1%)
Non-visceral metastasis^c			
Bone	133 (67.9%)	51 (70.8%)	82 (66.1%)
Lymph nodes	68 (34.7%)	27 (37.5%)	41 (33.1%)
Skin and soft tissue	29 (14.8%)	8 (11.1%)	21 (16.9%)
Visceral (incl. CNS) metastasis			
Pulmonary	64 (32.7%)	26 (36.1%)	38 (30.6%)
Liver	56 (28.6%)	24 (33.3%)	32 (25.8%)
Pleura	33 (16.8%)	9 (12.5%)	24 (19.4%)
Peritoneum	10 (5.1%)	<5	<10
CNS	8 (4.1%)	<5	<5

Figure 1. Patients receiving treatment during follow-up, by intent and menopausal status

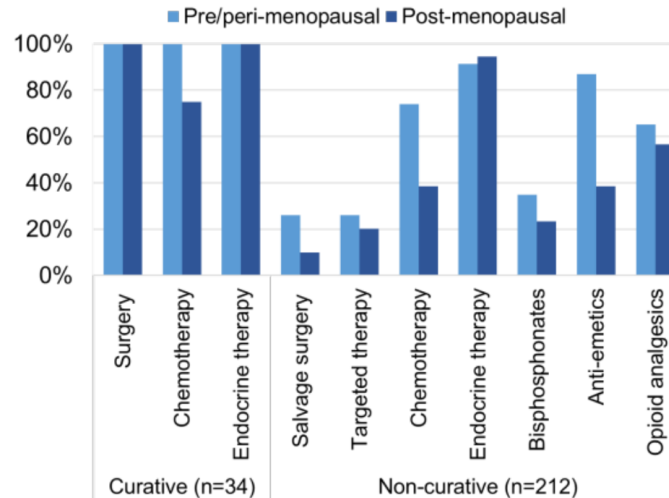

Figure 2. Categories of sequential non-curative treatment received (up to 3 LoT shown). The 7 most common regimen sequences are named and corresponding numbers of patients shown

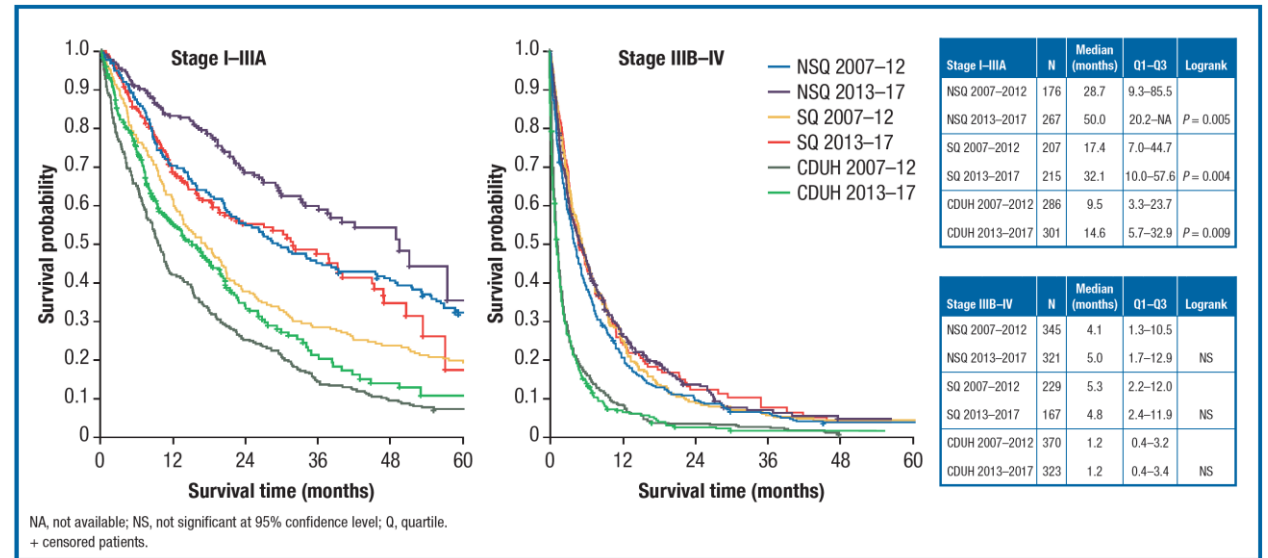

Case Study – Lung Cancer – BMS

- Non-small cell lung cancer
 - Patient characteristics (e.g. histology, biomarkers, stage)
 - Treatment patterns (lines of chemotherapy, and surgery)
 - Outcomes from diagnosis, recurrence(s) to death

9th European Lung Cancer Congress (ELCC)

Multi-centre study – Ovarian cancer - ORWIC

- **Epithelial ovarian cancer**
 - Intermediate frequency cancer
 - Complex treatment pathways, multiple lines of therapy
 - Recent introduction of targeted therapy, variably funded internationally
 - Diverse international standards of care
- **ORWIC**
 - Multi-centre study, multi-nation study
 - Unify disparate models of data capture and curation

 - Respect opt-out but no formal consent
 - Accept sharing patient level data is not possible (GDPR, IG, privacy)
 - Establish common data analysis

Multi-centre study – Ovarian cancer - ORWIC

- Epithelial ovarian cancer
 - Patient characteristics (e.g. histology, biomarkers, stage, breast cancer)
 - Genetic and molecular phenotype (germline, somatic BRCA, HRD)
 - Treatment patterns (surgery, lines of chemotherapy)
 - Outcomes from diagnosis & recurrence(s) to death

- **Common data model agreed**
- Data curated by each centre to CDM
- Single analytic script defined (R package)
- Parallel analysis of data by each site
- Output of analysis combined

Multi-centre study – Ovarian cancer – ORWIC

Table 1: Patient characteristics at diagnosis

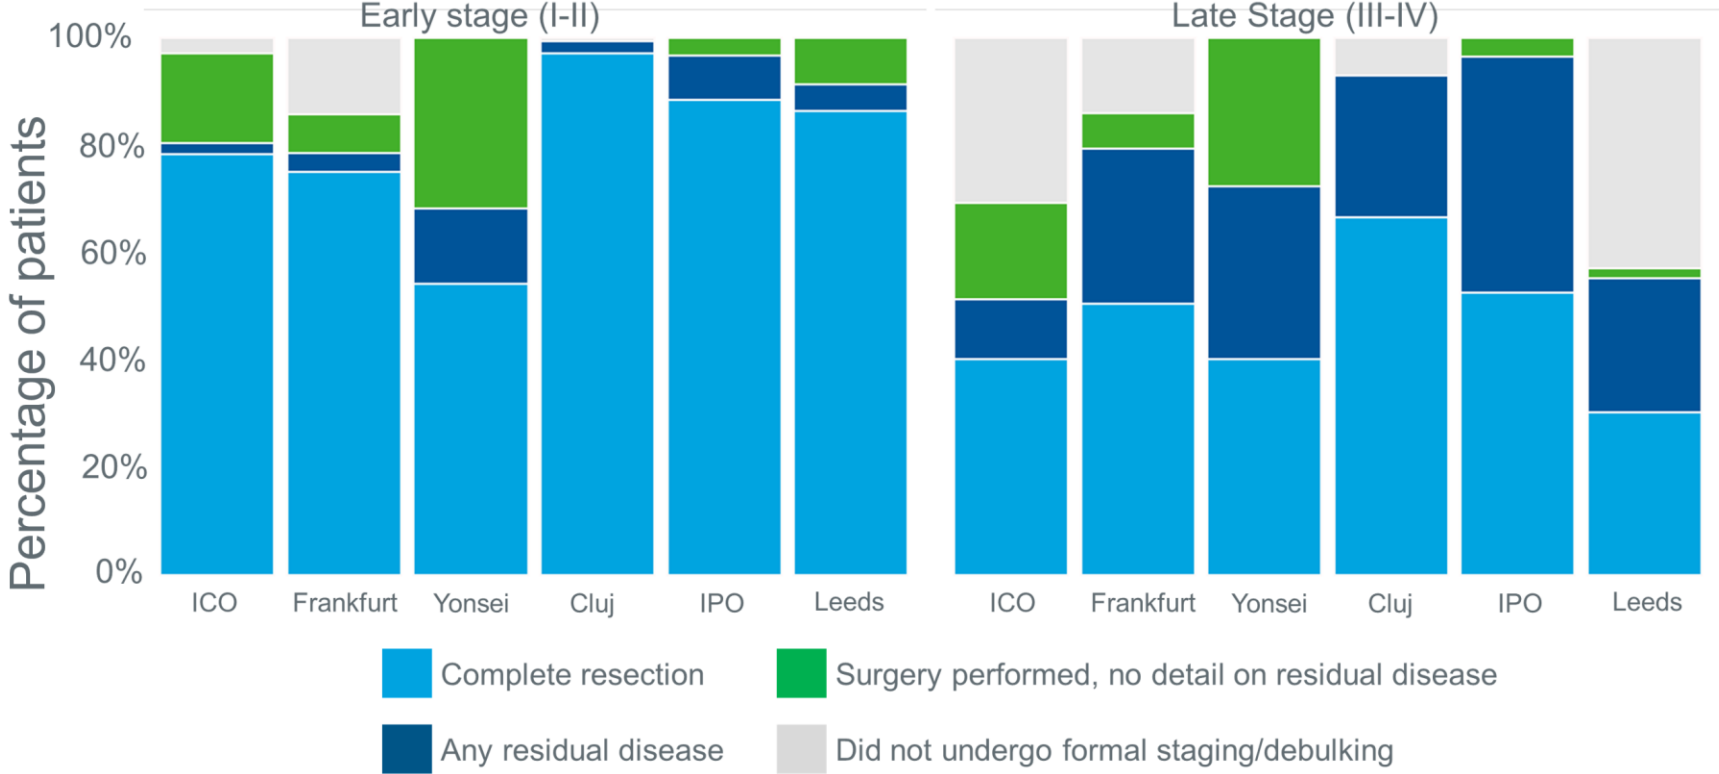

Overall Study Cohort	ICO	Frankfurt	Yonsei	Cluj	IPOP	Leeds	
	696	140	851	446	268	515	
Age Group	<45	45 (6.5%)	17 (12.1%)	166 (20.4%)	81 (18.2%)	12 (4.5%)	20 (3.9%)
	45-59	174 (25.0%)	54 (38.6%)	440 (54.1%)	209 (46.9%)	75 (28.1%)	125 (24.3%)
	60-74	329 (47.3%)	51 (36.4%)	217 (26.7%)	139 (31.2%)	114 (42.7%)	235 (45.6%)
	75+	148 (21.3%)	18 (12.9%)	28 (3.4%)	17 (3.8%)	67 (25.1%)	135 (26.2%)
FIGO stage at diagnosis	I	73 (12.5%)	21 (15.0%)	232 (27.3%)	101 (22.7%)	39 (14.6%)	56 (10.9%)
	II	27 (4.6%)	8 (5.7%)	68 (8.0%)	37 (8.3%)	18 (6.7%)	25 (4.9%)
	III	323 (55.2%)	72 (51.4%)	279 (32.8%)	259 (58.1%)	106 (39.7%)	293 (56.9%)
	IV	162 (27.7%)	35 (25.0%)	211 (24.8%)	49 (11.0%)	94 (35.2%)	140 (27.2%)
	Missing/Unknown	111 (15.9%)	4 (2.9%)	61 (7.5%)		11 (4.1%)	<6

2,916 patients

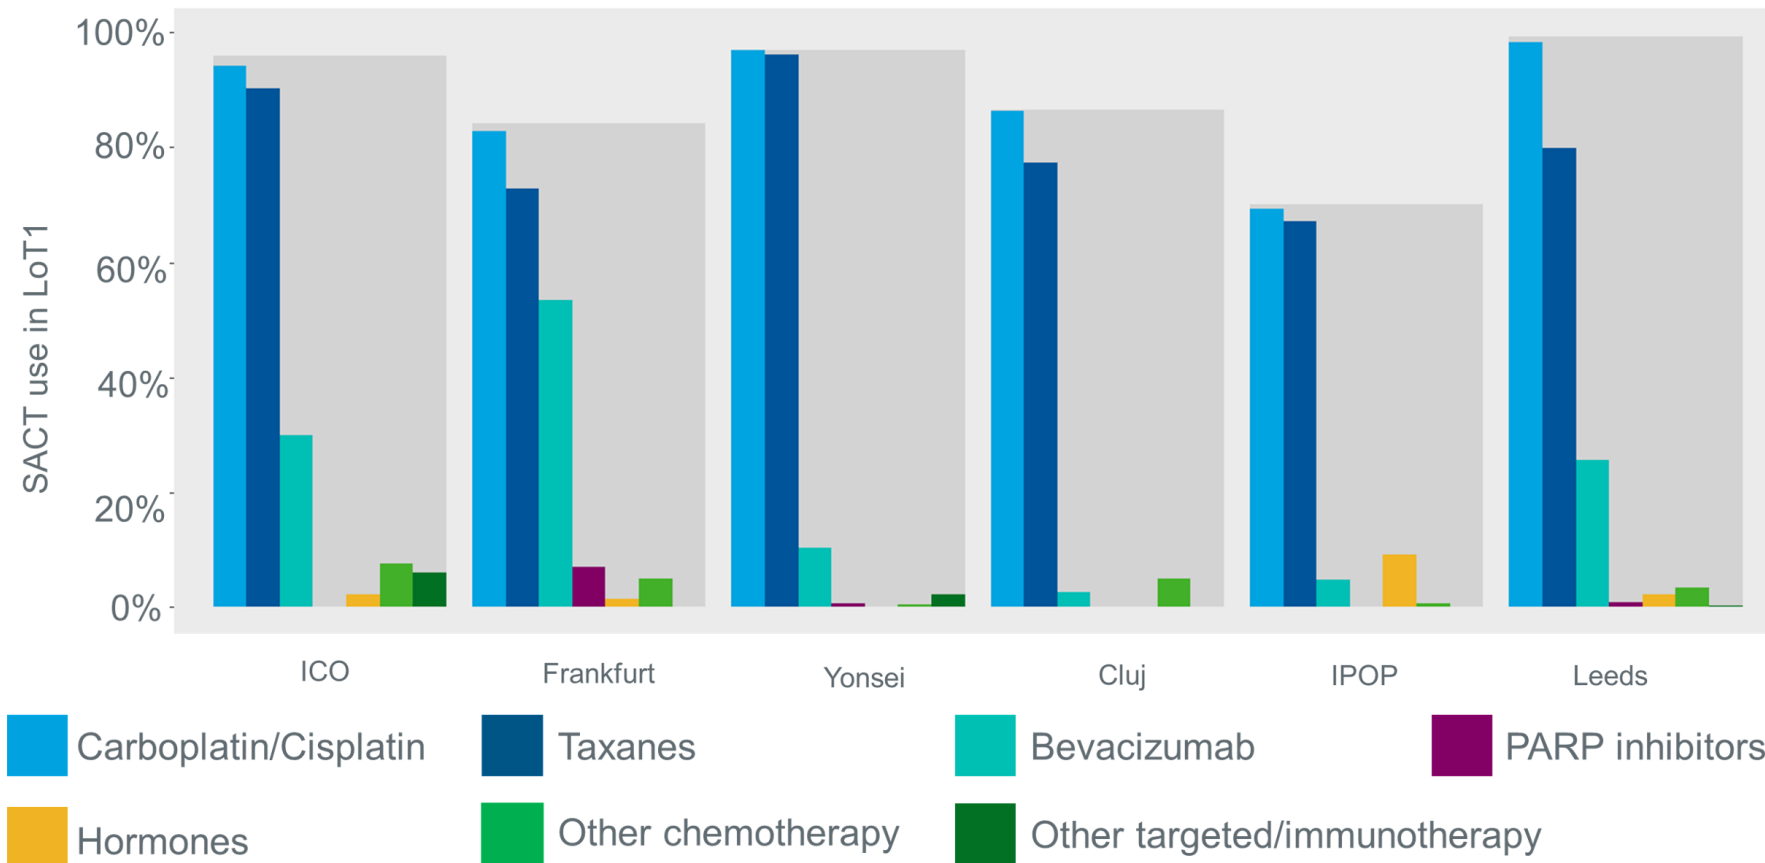

Multi-centre study – Ovarian cancer – ORWIC

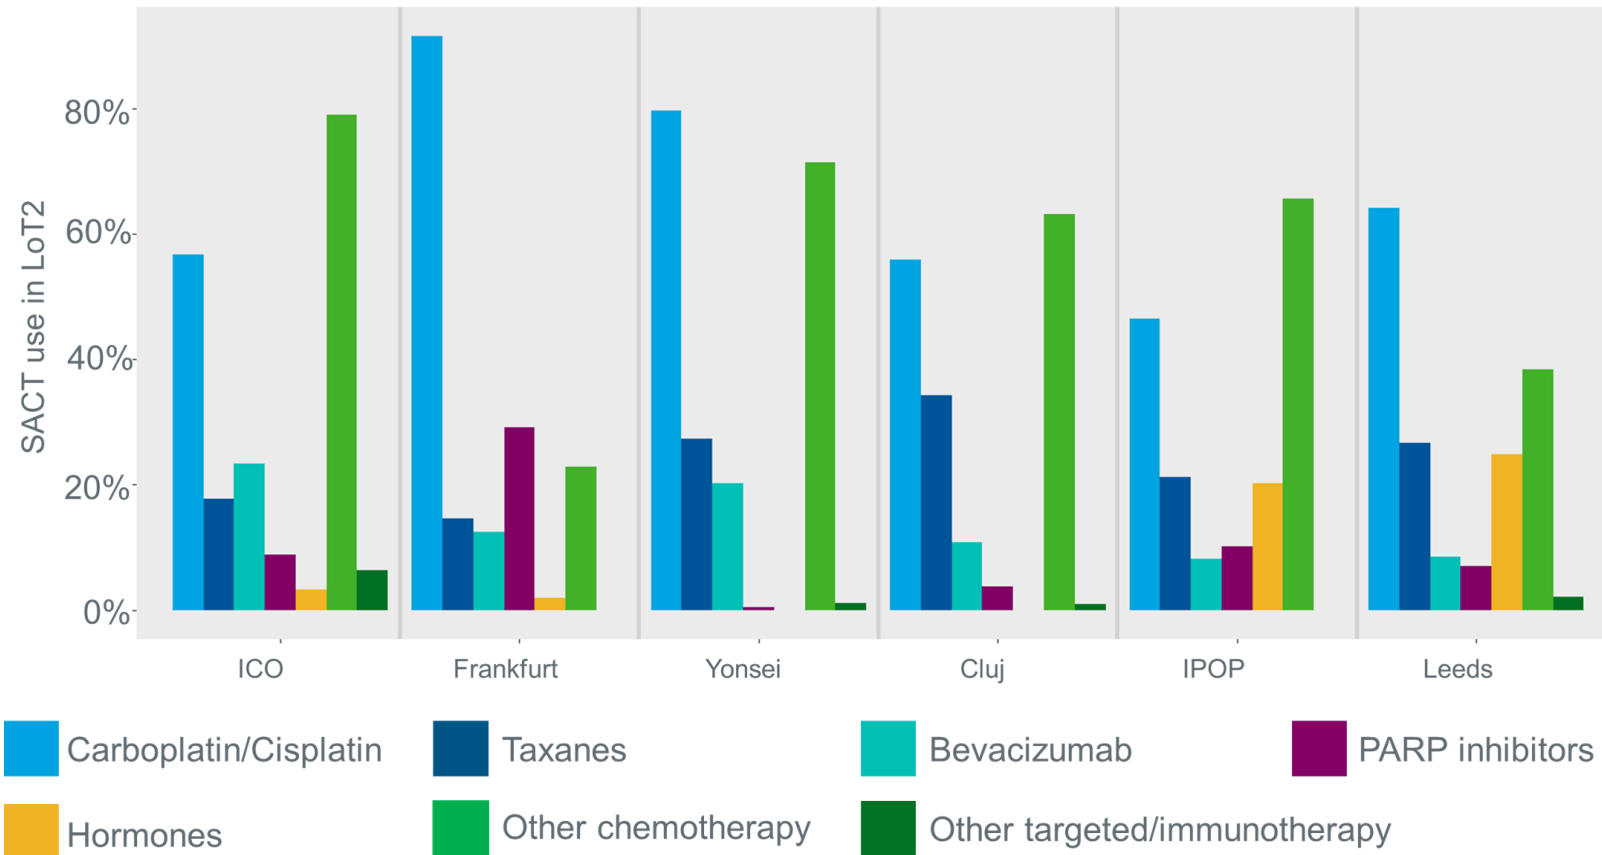

Debulking surgery

Multi-centre study – Ovarian cancer – ORWIC – First-line therapy

Multi-centre study – Ovarian cancer – ORWIC – Second line therapy

Multi-centre study – Ovarian cancer – ORWIC

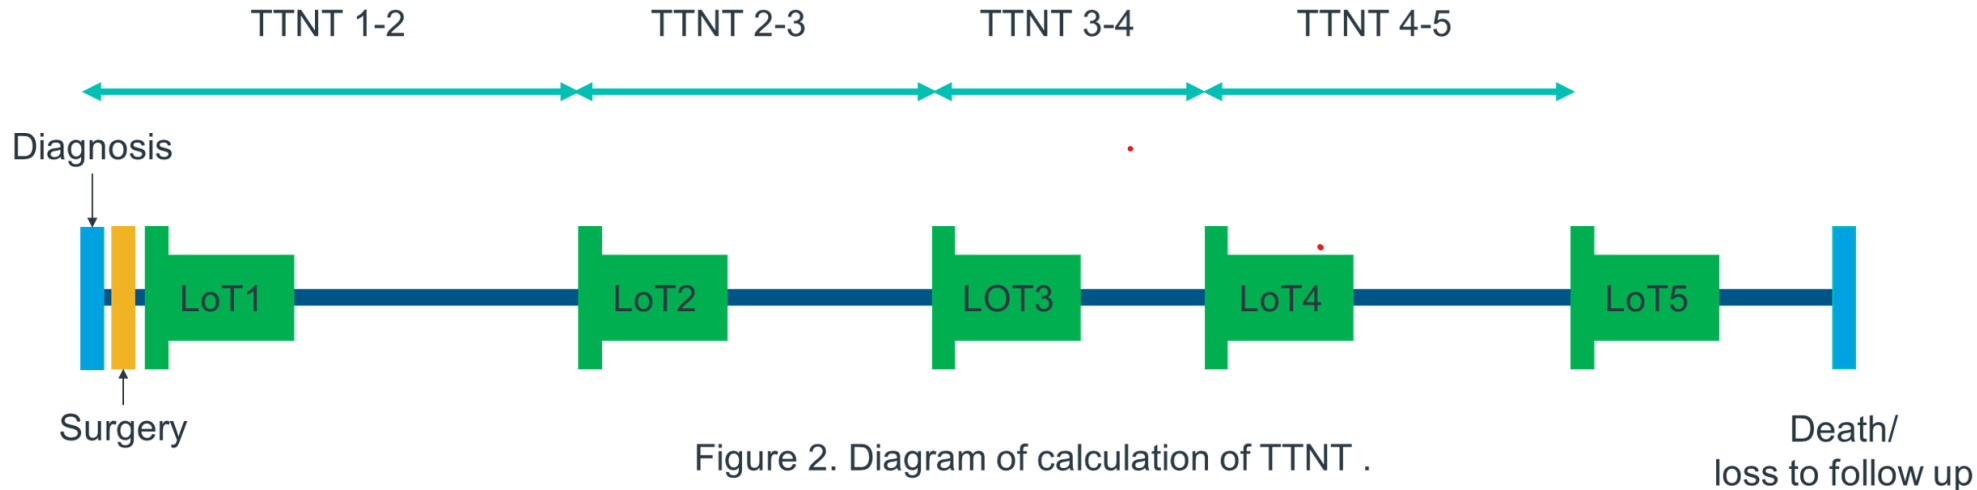

Figure 2. Diagram of calculation of TTNT .

Multi-centre study – Ovarian cancer – ORWIC

1st line therapy (LOT1) – 509 patients

Received next line therapy

2nd line therapy (LOT2) – 282 patients

3rd line therapy (LOT3) – 168 patients

- Platinum combination
- No maintenance
- Died
- Platinum single agent
- Bevacizumab
- Alive, no progression
- Taxane single agent
- PARP inhibitor
- Progression, further Rx
- Hormone monotherapy
- Trial / Other

Multi-centre study – Ovarian cancer - ORWIC

- Epithelial ovarian cancer
 - Patient characteristics (e.g. histology, biomarkers, stage)
 - Treatment patterns (lines of chemotherapy, and surgery)
 - Outcomes from diagnosis, recurrence(s) to death

- **Common data model agreed**
- Data curated by each centre to CDM
- Single analytic script defined (R package)
- Parallel analysis of data by each site
- Output of analysis combined

How could we improve ?

RWE – the data-model

We need to agree a common language
for Real World Evidence

We need to agree key definitions

Date of diagnosis ?

Progression or Time to Next Treatment ?

We need a common data model

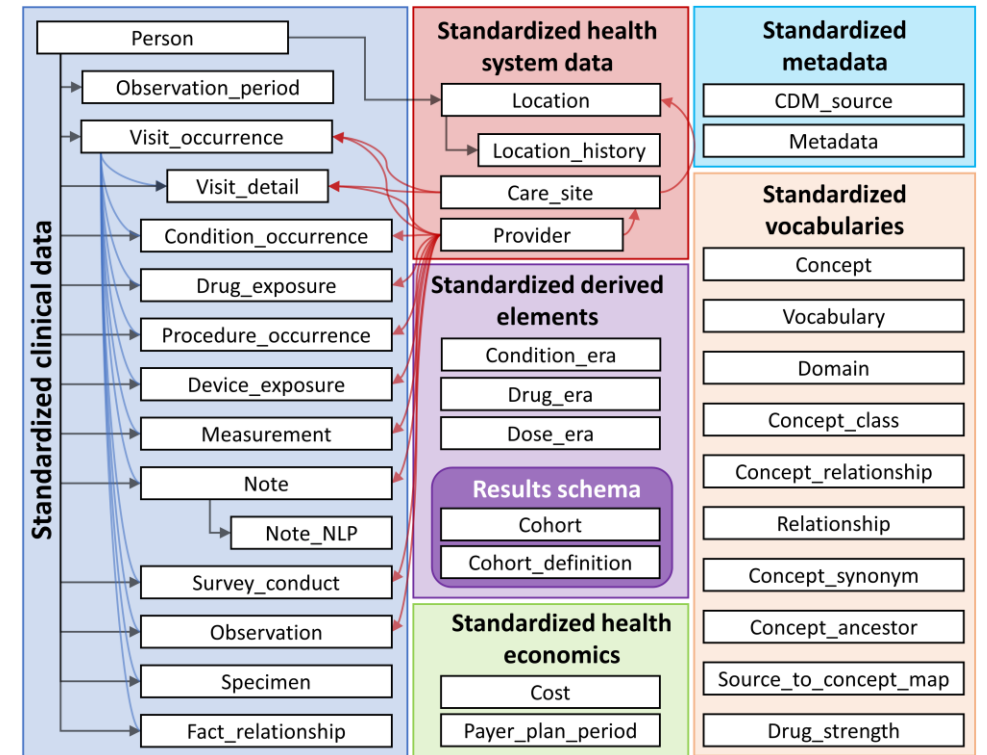

RWE – the data-model

We need to agree a common language for Real World Evidence

We need to agree key definitions
Date of diagnosis ?
Progression or Time to Next Treatment ?

We need a common data model

Observational Medical Outcomes Partnership
OMOP

RWE – Data Curation and plain text

- 85% of EHR data is plain text
'Impossible' to analyse at scale
- Coded data will never replace plain text in EPRs
Cannot capture the nuance of a clinical interaction
- Clinicians should not be forced to adapt to technology
Technology should adapt to clinicians

Problem: We need Next Generation Informatics

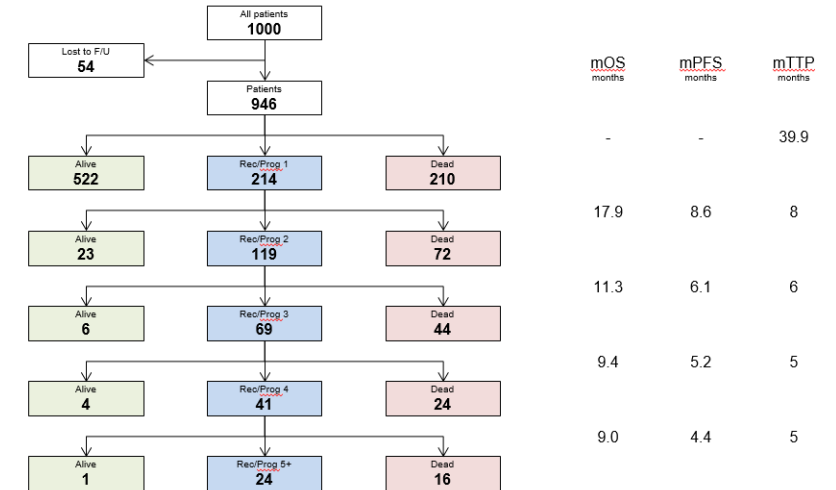

RWE – Data Curation and plain text

- 85% of EHR data is plain text
'Impossible' to analyse at scale
- Coded data will never replace plain text in EPRs
Cannot capture the nuance of a clinical interaction
- Clinicians should not be forced to adapt to technology
Technology should adapt to clinicians

Problem: We need Next Generation Informatics

Solution: AI/ML, Natural Language Processing

RWE – Privacy and IG, Rules and Regulations

- Consent or permission ?
 - UK - individual opt-out
 - Explicit permission – global or study-specific
- **Sharing data between centres is challenging**
- **Sharing data between countries is very complex**

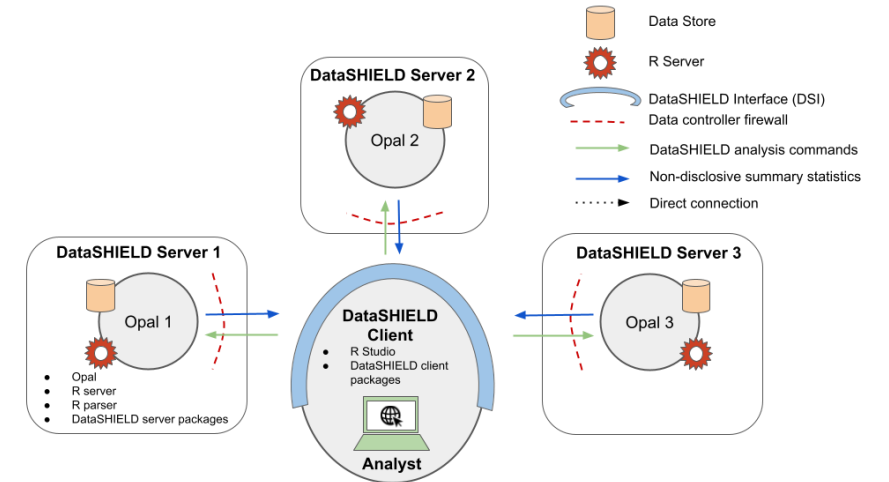

RWE – Privacy and IG, Rules and Regulations

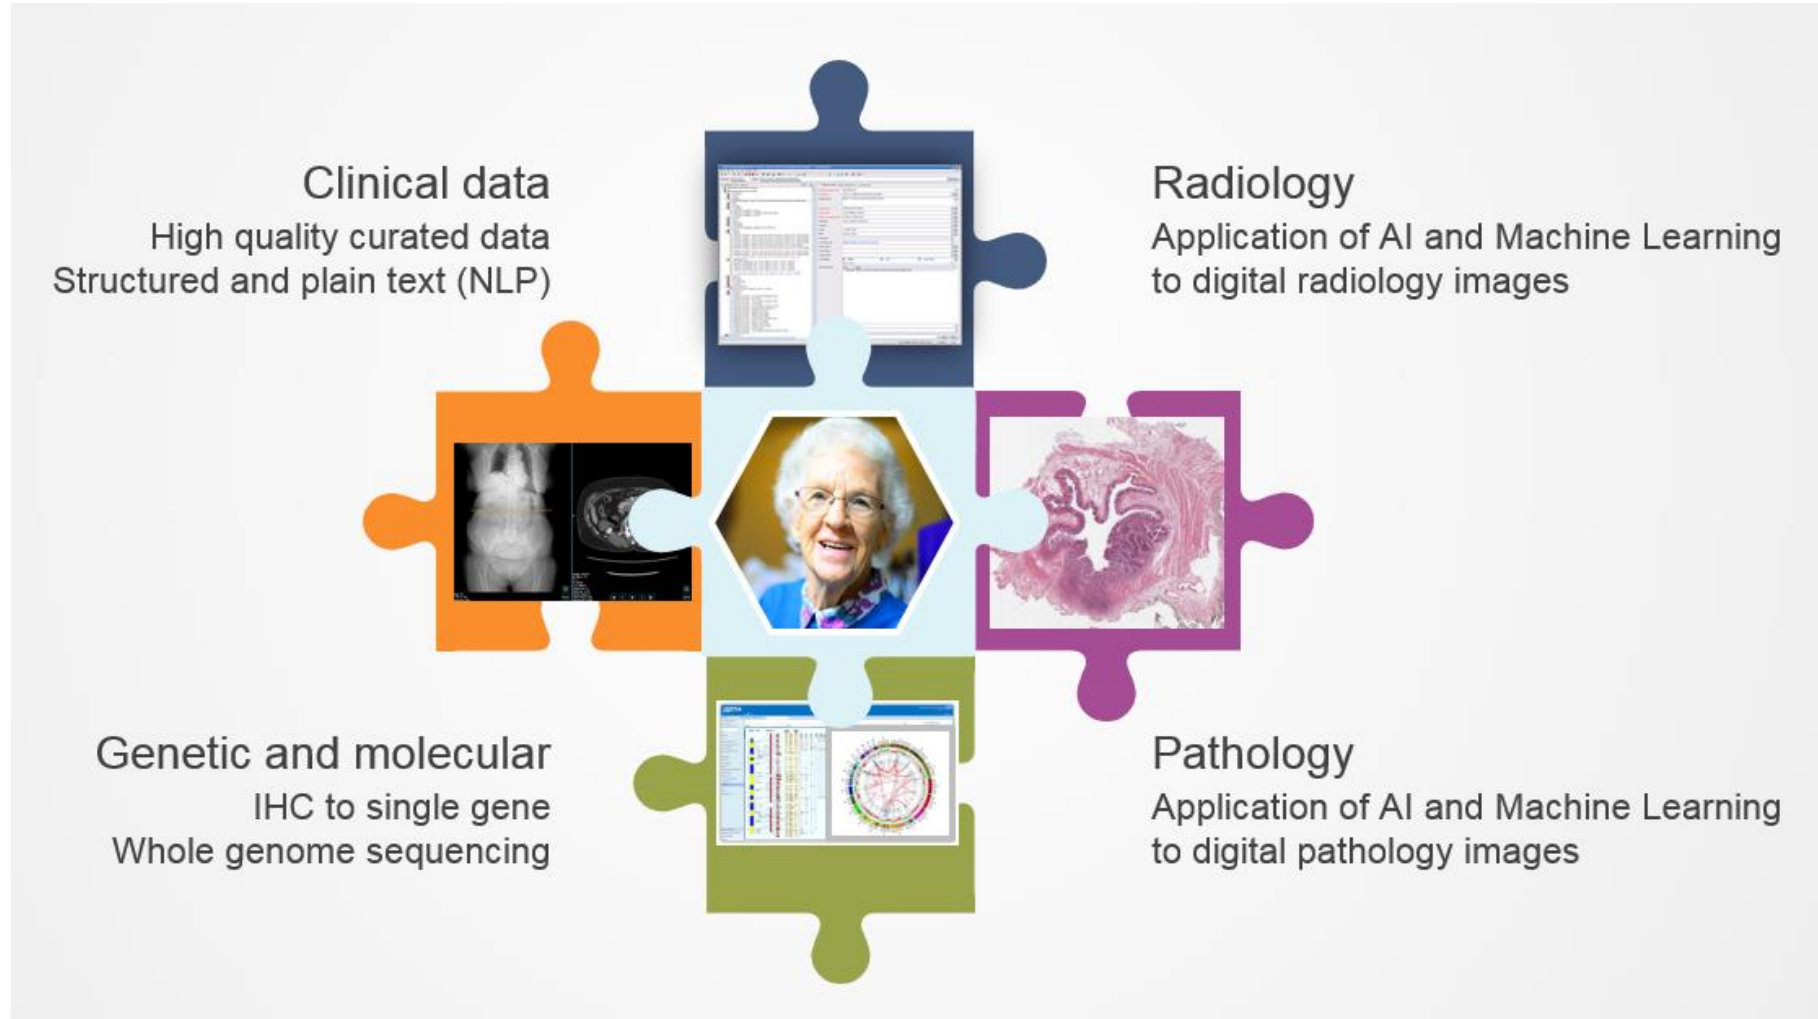

- Consent or permission ?
 - UK - individual opt-out
 - Explicit permission – global or study-specific

- **Sharing data between centres is challenging**
- **Sharing data between countries is very complex**

- Do NOT bring the data to the analysis
- **Bring the analysis to the data**
- **FEDERATED ANALYSIS**

RWE – Extended datasets

ORWIC – State of the Art ?

- **I hope not**

- Shared ambition to use every patient's experience to help others
- Patient, public and carer – support and active involvement

- Application of AI and ML to curation including NLP
- Common Data Model – OMOP
- Federated analytics
- Extend data to digital imaging and pathology, molecular/genetic, PROMs

Thankyou !
