ProTarget: A Danish Nationwide Clinical Trial on Targeted Cancer Treatment based on Genomic Profiling

Primary Objectives:

To evaluate the anti-tumor activity and toxicity of commercially available, targeted anti-cancer drugs used for treatment of patients with an advanced solid tumor, multiple myeloma or B cell non-Hodgkin lymphoma that harbours a genomic- or protein expression variant known to be a drug target or to predict sensitivity to a drug.

ProTarget

Challenges designing a trial

- Multiple targets
- Multiple diagnoses
  - ➢ Rare indications
- Multiple detection methods
  - Panels
  - WES
  - WGS
  - IHC

- Several different pharmaceutical companies
- Different hospitals
- Different regional legal entities
- Data sharing

Challenges designing a trial

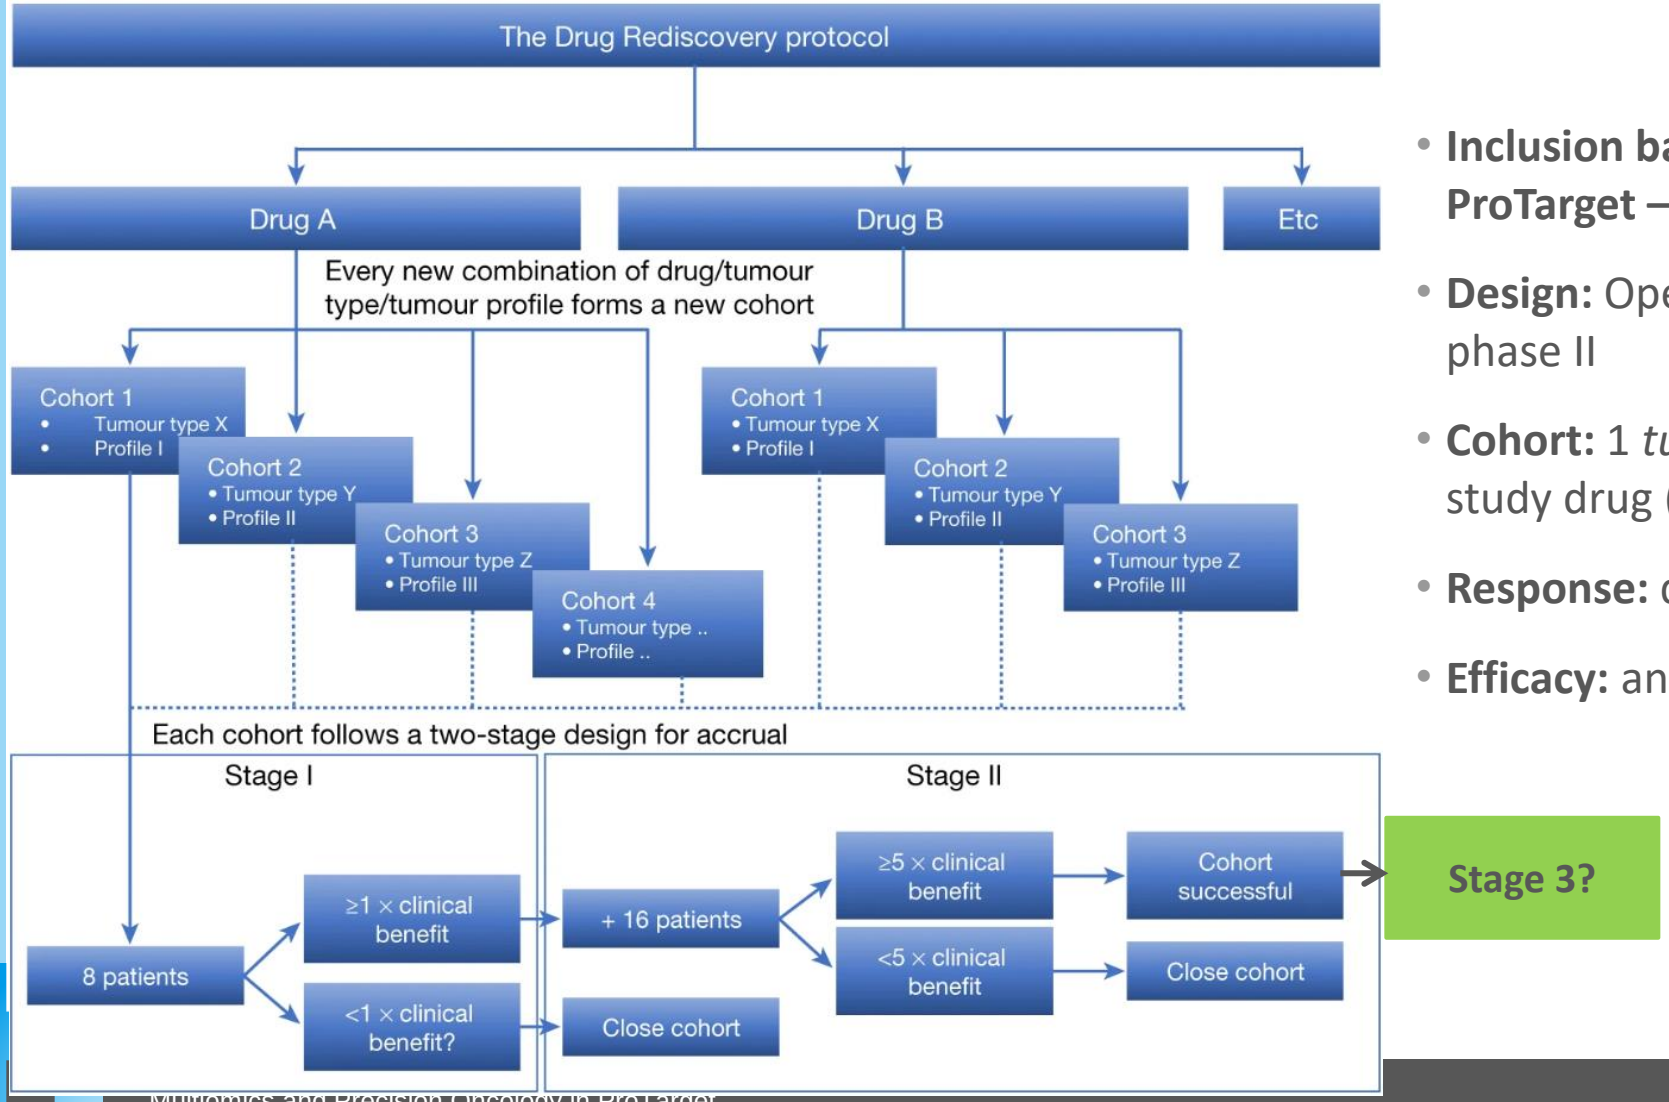
- Multiple targets
  - As many collaborators as possible
- Multiple diagnoses
  - Take into account potential differences in response in different diagnoses
- Rare indications
  - Share data with other European trials
- Multiple detection methods
  - Enroll patients on any method at any time
    - Retrospective validation with fresh biopsy and WGS + RNAseq
- Several different pharmaceutical companies
  - Separate contracts
- Different hospitals
  - Contract negotiations
  - Initiate based on wishes and abilities
- Different regional legal entities
  - Political effort to harmonize across the countrie
- Data sharing
  - Important intention to share data in Europe

ProTarget - Design

- **Tumor board is the core**
- Pragmatic opening of cohorts
- Decision regarding molecular eligibility decided by the tumor board
  - Relevant driver
  - Absence of resistance variant
- National collaboration on pipelines
- National collaboration on variant classification

ProTarget

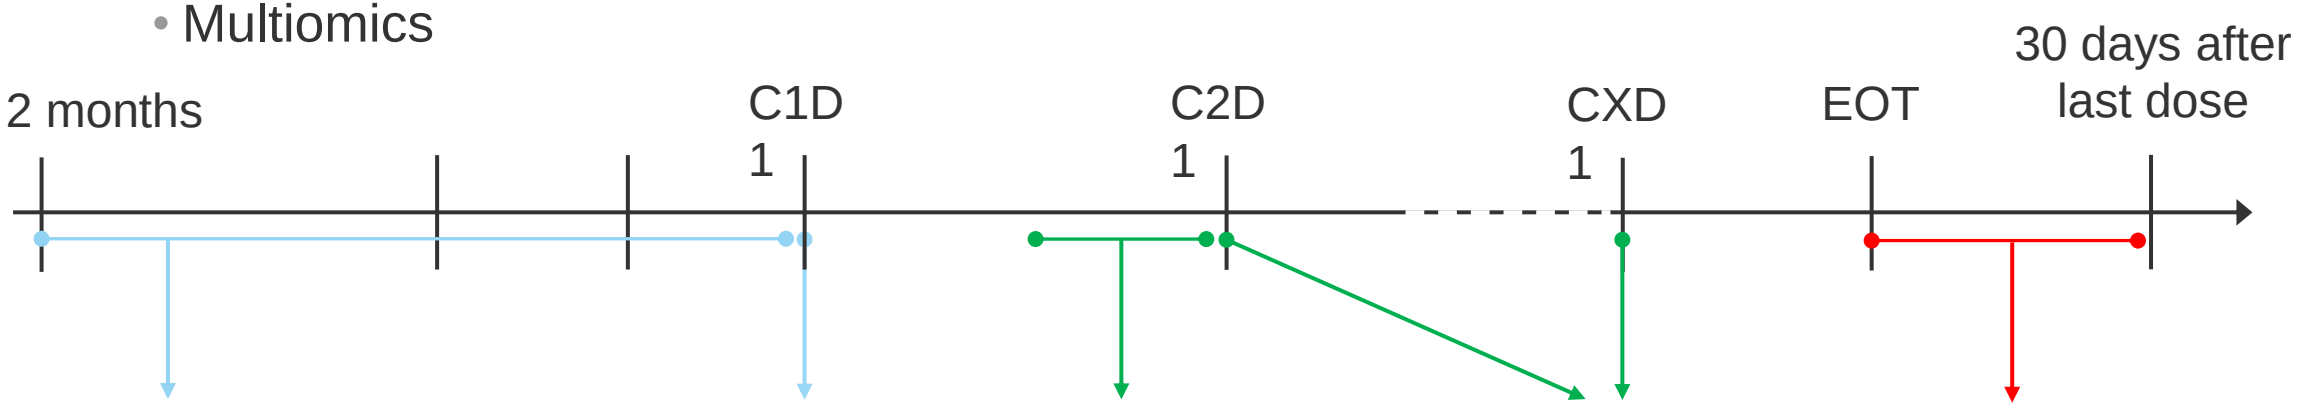
Cohort design and efficacy analyses



- **Inclusion based on genomic test outside of ProTarget – approved by tumor board**
- **Design:** Open label, single arm, multi center phase II
- **Cohort:** 1 *tumor type* + 1 molecular profile + 1 study drug (or combination)
- **Response:** defined as CR, PR or SD ≥16 weeks
- **Efficacy:** analyzed per cohort

Translational workup

- Focus on:
  - Clonal evolution
  - Intrinsic and acquired resistance
  - Multiomics



Screening:
≤2 mdr. prior to C1D1
- WGS and RNAseq
- FFPE
- Germline

C1D1
- ctDNA (STRECK)

OT, Cycle1 follow-up:
Day 15-28 in C1
- WGS and RNAseq
- 1 biopsi til patologi

On treatment CXD1
- ctDNA (STRECK)

PD/EOT:
<30 days after EOT
- WGS and RNAseq
- ctDNA (STRECK)

ProTarget – available IMPs

Roche

- ALECTINIB – ALK/ROS1
- ATEZOLIZUMAB – TMBh/MSI/dMMR
- ERLOTINIB - EGFRmut
- COBIMETINIB and VEMURAFENIB BRAF V600E
- TRASTUZUMAB and PERTUZUMAB – HER2
- TRASTUZUMAB EMTANSIN – HER2
- VISMODIGIB – PTCH1

Pfizer

- AVELUMAB – TMBh/MSI/dMMR
- AXITINIB – VGFR1-3

GSK

- NIRAPARIB – BRCA1-2/ATM/ATR/HRD

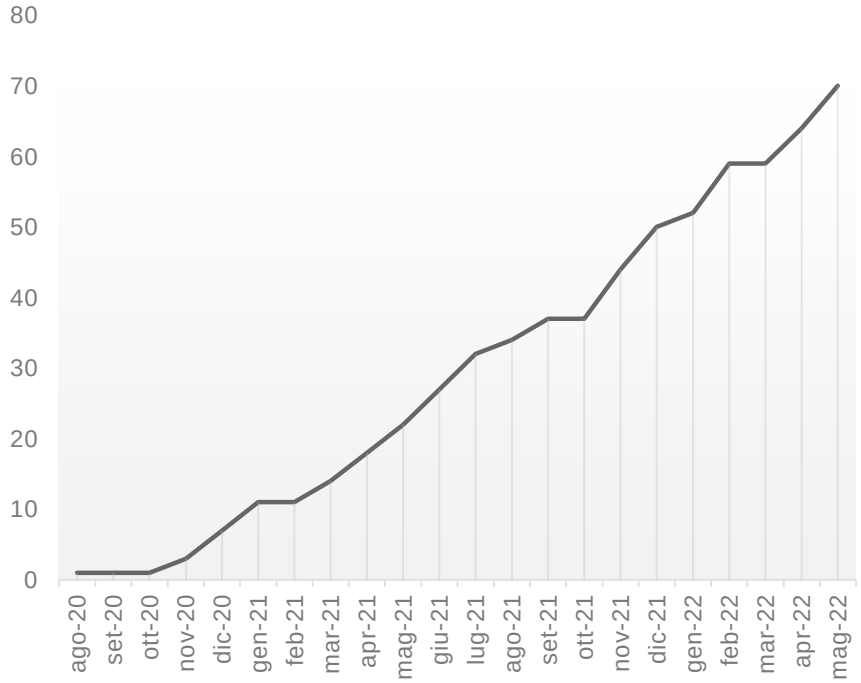
Incyte

- PEMIGATINIB – PDGFR/FGFR

Two more from other company after ammendment

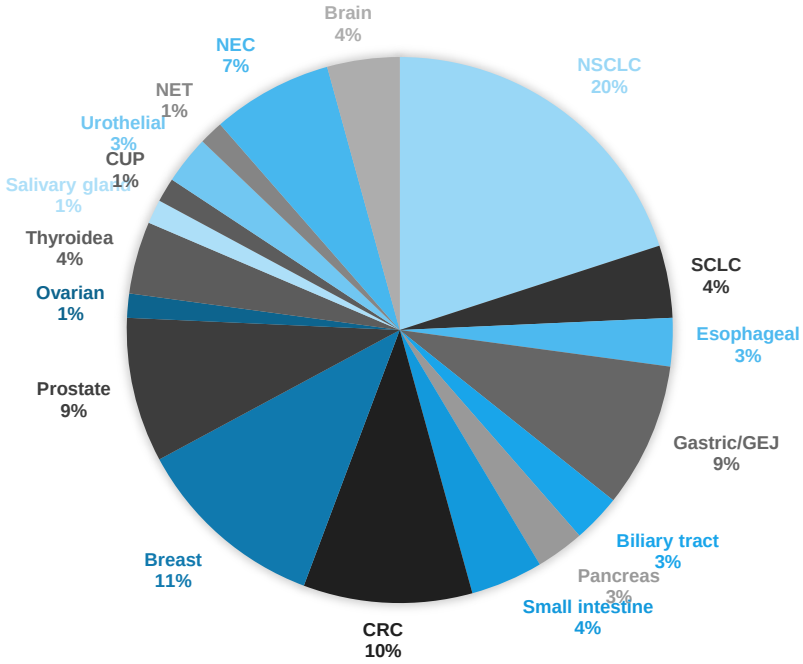
Inclusion in ProTaget

Accumulated inclusion

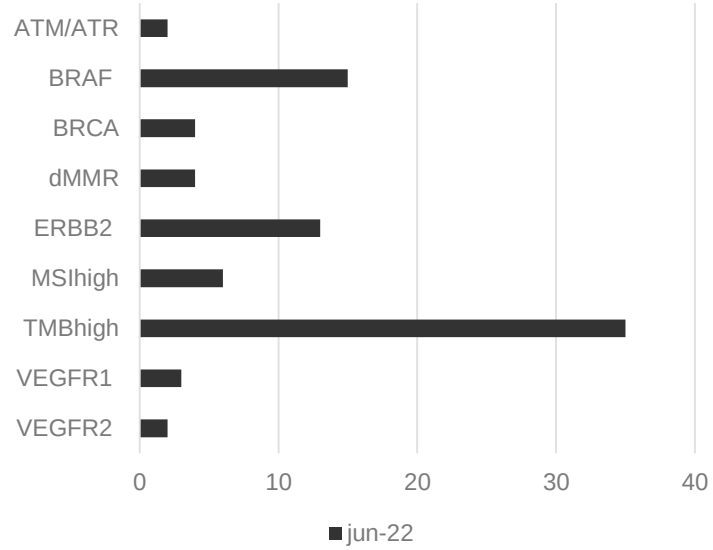


Total: 87 pts
44 cohorts
Sept. 1st 2022

PRIMARY TUMOR TYPE



ProTarget druggable variants



HER2 amplified CRC

- Exhausted treatment options
- Treated with HER-2 dual inhibition

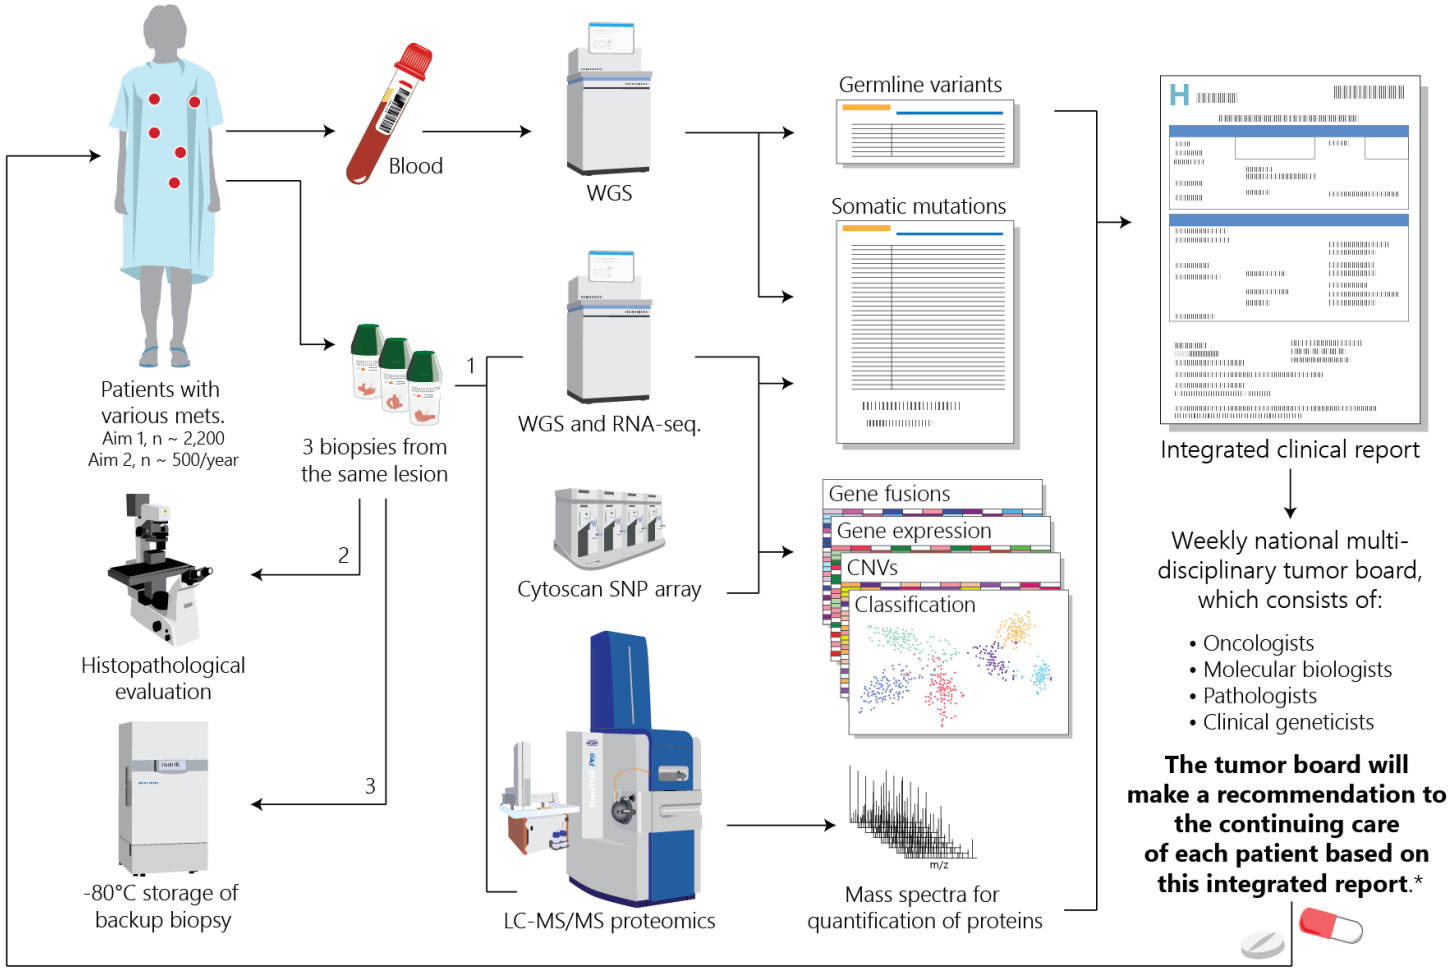
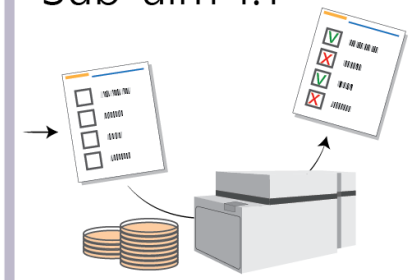
Aims 1 (retrospective) and 2 (prospective): the multi-omics approach

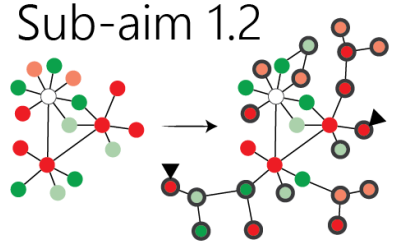


Sub-aim 1.1



We will validate targets from the multi-omics approach in patient-derived organoids using high-throughput drug screenings.

Sub-aim 1.2



We will add phosphoproteomics on selected cohorts from aim 1 and aim 2 to better understand resistance mechanisms and clonal evolution as well as potentially identify targets to overcome resistance.

* In aim 2, recommendations have already been made for the retrospective samples (Tuxen et al., 2019)

ProTarget: A Danish Nationwide Clinical Trial on Targeted Cancer Treatment based on Genomic Profiling

- Integration of other methods
  - Drug screen on patient derived organoids
  - Proteomics
  - Phospho-proteomics
  - Kinase assays

ProTarget

Rigshospitalet
Centre for Cancer and Organ Diseases

Prioritizing drug targets and candidates in phase1

Quantitative Proteomics with siRNA Screening Identifies Novel Mechanisms of Trastuzumab Resistance in HER2 Amplified Breast Cancers*

Alaina P. Boyer‡§, Timothy S. Collier‡§, Ilan Vidavsky¶, and Ron Bose‡‖**

FAK (PTK2/FAK) and Paxillin (PXN) also showed significantly increased protein ratios. FAK and PXN localize to focal adhesions, play a key role in integrin signaling, and affect cell migration and cell adhesion (50, 51). FAK is a cytoplasmic tyrosine kinase, and it can form a complex with Src family kinases (50). Dephosphorylation or down-regulation of FAK and PXN by EGFR and HER2 signaling has been previously reported in two phosphoproteomic studies (24, 52). Activation of FAK occurs in pancreatic and other cancers, and FAK inhibitors are undergoing drug development (53, 54).

HER2 amplified CRC

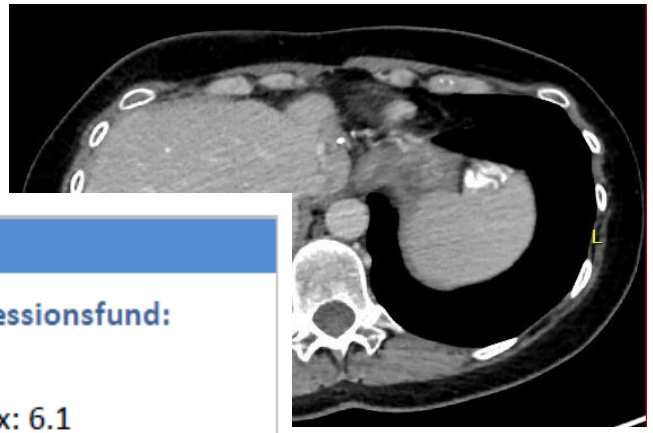
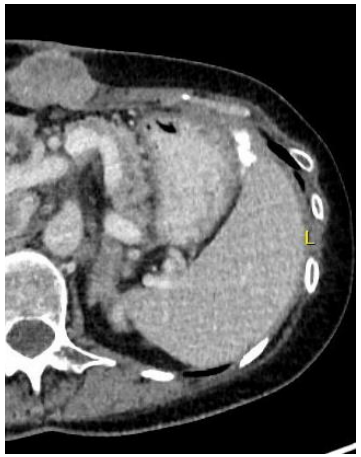
After 4 months



ths



Future development and challenges

Challenges

- Lower inclusion rate than expected
  - Competing trials
  - Detection of resistance mutations on WGS/RNAseq
- Inclusion of patients without measurable disease
- Inclusion of patients without biopsy
- Financial
- Capture data from EMR to eCRF
- Integration with genomic data

Development

- Including more targeted agents
- Opening of stage 3
  - Reluctance from authorities
- Doing translational research on collected tissue
  - IO cohorts mature for initial investigations
- Opening trial combining targeted agents
  - Obstacles:
    - Pharma
    - Site experience in phase 1b trials
    - N of 1 trials

Copenhagen Master Observational Trial (C-MOT)

- The *master observational trial protocol* seeks to combine the depth of molecularly based master protocols (e.g. basket and umbrella trials) with the breadth of real-world data
- C-MOT is a prospective, investigator-initiated, non-interventional study
  - Aims to describe the safety and efficacy of standard of care or available clinical trials of targeted anti-cancer drugs
- C-MOT prospectively includes 1200 patients with lung or breast cancer
  - Genomic analysis at base, 1st and 2nd evaluation for each treatment course
  - Patient reported outcomes, QoL, PRO-CTCAE
  - Data from EHRs, including dosing of anti-neoplastic drugs, cancer supportive care drugs, comorbidities, biochemistry, microbiology, repeated measurements of vital signs, pathology, and radiology workup

Brugerguide - Slet før anvendelse

Brug tekst typografier

Brug **TAB** for at gå frem i tekst-niveauer. Klik **ENTER**, derefter **TAB** for at skifte fra et niveau til et næste

For at gå tilbage i tekst-niveauer, brug **SHIFT+TAB**

Alternativt kan
Forøg og **Formindsk** listeniveau bruges

Ændre slide layouts

1. Klik på pilen ved siden af **Layout** for at få vist en dropdown menu af mulige slides layout

2. Vælg **Layout** for at ændre dit nuværende layout til et alternativt

Nulstil slide

1. Klik på fanen **Hjem**

2. Vælg **Nulstil** for at nulstille placering, størrelse og formatering af pladsholdere til layoutets oprindelige design

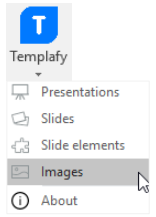
Indsæt billede

På slides med billedpladsholder eller hvilken som helst anden pladsholder, klik på pladsholderens kant. TIP: Hold Shift nede og klik på pladsholderen

A. Indsæt firma billede

1. Klik på den blå **Templafy**-knap

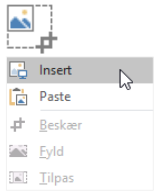
2. I drop ned menuen, vælg **Images**, eller klik på **Images**-knappen i Templafy vinduet i højre side af skærmen



B. Browse efter andre billeder

1. Klik på **Image Tools-**knappen som findes under firma fanen

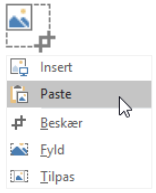
2. Klik på **Indsæt** for at browse efter et billede



C. Indsæt et kopieret billede

1. Klik på **Image Tools-**knappen som findes under firma fanen

2. Klik på **Paste** for at indsætte det kopierede billede



Beskær billede

1. Klik **Beskær** for at ændre billedets fokus/størrelse

2. Ønsker du at skalere billedet, så hold **SHIFT**-knappen nede, mens du trækker i billedets hjørner

Tips: Hvis du sletter billedet og indsætter et nyt, kan billedet lægge sig foran tekst og grafik. Hvis dette sker, højreklik på billedet og vælg **Placer bagest**

For at justere sidenummerering, dato og sidefod

Gør dette som det sidste i din præsentation, så det slår igennem på alle slides

1. Klik på fanen **Indsæt**

2. Klik **Sidehoved og Sidefod**
(Tekst kommer fra Templafy)

Vælg **Anvend på alle** eller **Anvend** hvis det kun skal være på et enkelt slide

Hjælpelinjer

For at se hjælpelinjer

1. Klik på fanen **Vis** og sæt hak ved **Hjælpelinjer**

Tips: Alt + F9 for hurtig visning af hjælpelinjer
